

DICLOFENAC ISOPROPYL IMPURITY

<p>Chemical name: Isopropyl 2-(2-((2,6-Dichlorophenyl) amino) phenyl) acetate</p>	<p>CAS No. : [66370-79-4]</p>
<p>Category : Impurities / Metabolite</p>	
<p>Molecular Formula : C₁₇H₁₇Cl₂NO₂</p>	<p>Structure:</p>  <p>The chemical structure shows an isopropyl group (H₃C-CH(CH₃)-O-) attached to the carbonyl carbon of an acetate group. The other end of the acetate group is attached to a 2-((2,6-dichlorophenyl)amino)phenyl group, which consists of a benzene ring with chlorine atoms at the 2 and 6 positions, and an amino group (-NH-) at the 1 position, which is further attached to a phenyl ring.</p>
<p>Molecular Weight : 339.24</p>	
<p>Product Code : RBPL-D0102</p>
